

Mechanical Engineering

Index of 2005 Articles

Adiutori, Eugene F.

Fourier Is this French mathematician the true father of modern engineering? August, p. 30.

Beardsley, Chuck

Songs of the Subway. December, p. 68.

Boehm, Robert, Brackley Frayer, and Joe Aldridge

Engineering for the Spectacle Technology on the stage keeps reaching higher. January, p. 42.

Boswell, Ray

Buried Treasure Geologists estimate that 200,000 trillion cubic feet of natural gas are locked solid in arctic and offshore ice. Will methane hydrate fuel the future? *Power & Energy*, February, p. 8.

Brown, Alan S.

The China Road The outsourcing option isn't as cheap or as easy as it looks. March, p. 36.

Getting a New Life Bioprocessing has opened a world of its own, and a standards committee is going after it. December, p. 26.

Where the Engineers Are It may begin with simple services, like CAD conversions, but it's the first step in outsourcing the advanced jobs to Asia. June, p. 26.

Bryden, Mark, and Doug McCorkle

Virtual Engineering In powerful new workspaces, the next-generation power plant is only the beginning. November, p. 38.

Dareing, Don W., and Thomas Thundat

Mighty Mites The future belongs to machines built at molecular scales—if we develop tools to engineer them. September, p. 34.

DeGaspari, John

Beyond Silicon Engineers are expanding their material world to reduce the cost and tailor performance of microdevices. July, p. 30.

A New Dawn for Diesel Will Americans pay the price to put light-duty diesels on U.S. highways? January, p. 26.

Ports Look Outward Seaports, shippers, and the government are linking their efforts to maintain a critical infrastructure. May, p. 30.

Pumped Up Microdevice manufacturers shift into high gear, as new federal rules give them millions of tires to ride. April, p. 34.

You Know the Drill Magnetic sensors in a bone implant give trauma surgeons the green light. May, p. 46.

Duffey, Romney B.

Green Atoms Embracing nuclear power may be the only way to save the planet from carbon-induced warming. *Power & Energy*, June, p. 8.

Ehrenman, Gayle

Eyes on the Line Vision-enabled robots are helping factories keep the production lines rolling, even when the parts are out of place. August, p. 25.

Fly the Grayer Skies As Baby Boomers reach senior citizenship, Boeing looks for ways to meet their changing needs. *Mechanical Engineering Design*, March, p. 8.

Loneliness of the Long Distance Glider.

March, p. 72.

Mining What Others Miss Highlighting the subtleties in 10^{12} bytes of data, technology tries to clear up its own complex mess. February, p. 26.

In an Octopush's Garden.

October, p. 72.

Slides Rule Before the calculator, before the computer, a simple

tool that worked remains far from forgotten. December, p. 40.

Frey, Daniel D., and Kemper Lewis

The Deciding Factor Design engineers make decisions for a living. Research looks for ways to make the process go smoother. *Mechanical Engineering Design*, March, p. 20.

Goldense, Bradford L., and John R. Power

Developmental Overload How does it happen? How can you manage it? *Engineering Management*, March, p. 13.

What's On at Your Shop? To keep your R&D factory running smoothly, you need to know that it's carrying the right load. *Engineering Management*, July, p. 11.

Hipple, Jack

Invention on Demand A system lays down tools for creative problem-solving and product design. November, p. 36.

Huber, Peter, and Mark P. Mills

The End of the M.E.? They call this "convergence." Old lines are changing, or disappearing altogether. May, p. 26.

Hutchinson, Harry

Best Intentions The tools of improvement don't always fit the hand in need. February, p. 36.

Calculating Risks Can the science that judges the safety of nuclear plants secure the infrastructure of a nation? January, p. 40.

Culture Clash Globalization is creating new industrial powerhouses—but where does that leave the old ones? December, p. 36.

Every Breath You Take.

August, p. 48.

Going the Distance They put this frame through the long haul in a short time. July, p. 37.

Plowshares to Swords and Back The military buildup of World War II led to victory and, by an indirect route, to a richer world. July, p. 34.

Reverse Engineering a Lost Culture.

July, p. 62.

Run Silent, Run Long The Stirling engine is earning a little more respect these days. *Power & Energy*, February, p. 5.

Sustaining the Good Life Once seen as the problem, engineers devise solutions for coexistence with the environment. November, p. 44.

Kuntz, Mark T., and Justin Dawe

Renewable. Rechargeable. Remarkable. Flow batteries can turn intermittent wind power from a utility manager's headache to a green and reliable energy source. October, p. 35.

Langston, Lee S.

New Horizons High-efficiency power generation and a climbing aircraft market are driving gas turbine technology. *Power & Energy*, June, p. 4.

ME Staff

Joining the Pieces Engineers are choreographing the assembly of the Joint Strike Fighter. December, p. 35.

ME Design Staff

Tennis, Anyone? A portable, battery-powered machine allows for four hours of practice time on the court in one stretch. *Mechanical Engineering Design*, March, p. 28.

Noor, Ahmed K.

Disruptions of Progress There's no slowing the pace of technological change: Engineering practice will have to adapt to keep up. November, p. 26.

Sharke, Paul

Cheaper Watches Research looks at wireless networks to

Tennis, Anyone? A portable, battery-powered machine allows for four hours of practice time on the court in one stretch. *Mechanical Engineering Design*, March, p. 28.

Noor, Ahmed K.

Disruptions of Progress There's no slowing the pace of technological change: Engineering practice will have to adapt to keep up. November, p. 26.

Sharke, Paul

Cheaper Watches Research looks at wireless networks to

lower the cost of monitoring plant machinery. February, p. 32.

Fast and Secure How much proof is tamperproof? June, p. 32.

A Fieldbus That Chooses A company introduces a different approach to machinery monitoring: This one sorts the information. August, p. 28.

Gas on the Water LNG makes its move. May, p. 36.

Idle Hour Truckers are the next target of the clean air force. January, p. 32.

No Run of the Mill Engineering one of a kind has its own peculiar challenges. March, page 32.

On-Machine Inspecting Turning ... and milling ... time into cash. April, p. 30.

Scramjets Fly! February, p. 72.

Stress Is Where You Find It. September, p. 64.

Top-Proofing A forklift maker takes control of the wheel. *Mechanical Engineering Design*, March, p. 18.

Sherback, Michael

Turning on a Dime Making robotic soccer players more agile proved to be a matter of direction for a group of fledgling engineers. *Mechanical Engineering Design*, March, p. 26.

Shaw, Wade H.

Making Sense of Change In a world of rapidly advancing technology, someone has to keep things under control. *Engineering Management*, March, p. 4.

Shultz, George P., and R. James Woolsey

The Petroleum Bomb Our nation's dependence on imported oil leaves it dangerously vulnerable to attack. October, p. 30.

Singer, Bryan

Efficient—and Vulnerable We recognize the danger posed by intruders to our control systems, but how about the well-intentioned insider? September, p. 42.

Stamatelatos, Michael

Venturing to the Far Reaches To push deeper into space, we must try to account for all the risks. September, p. 38.

Suppes, Galen J., and Truman S. Storwick

No Way Out? The barriers to developing an alternative fuels industry are not technical, but social. *Power & Energy*, February, p. 12.

Tan, Chor Weng

A Case for Credentials Becoming a certified engineering manager, under this new program, proves that you know your stuff. *Engineering Management*, July, p. 9.

Thilmany, Jean

Automation Crops Up Here. June, p. 72.

Design With Depth Traditional computer monitors haven't kept up with today's 3-D design software, say some display makers who intend to change that. December, p. 32.

Ephemeral Warehouse As their software races toward obsolescence, how can companies archive their 3-D CAD files? September, p. 30.

Everybody in the Loop Straight talk, and often, says this engineering manager, is what works for him on the job. *Engineering Management*, July, p. 7.

Experiment ... Early and Often To create a truly innovative product, you have to be willing to tinker. But establishing a culture to support that can be surprisingly hard. *Engineering Management*, March, p. 10.

Go-Between Shop floor software taps into CAD systems to get vital manufacturing information. May, p. 42.

Harm's Way Engineering software and microtechnology prepare a defense against terrorism. August, p. 22.

Improv Engineering A comedy producer imparts some idea-generating tips he's learned on the job. *Engineering Management*, March, p. 7.

Life, Meet Engineering The line between the life sciences and

engineering continues to blur; meanwhile, each discipline can take from the other. July, p. 26.

Made Your Way Manufacturers bank on giving customers exactly what they want. October, p. 40.

Managing Across Cultures How do you design food-processing equipment if you know next to nothing about the culture in which it will be used? February, p. 41.

A Short Stroll Boeing makes a big investment to get engineers and manufacturers speaking face-to-face. November, p. 32.

Soup to Nuts CAD is not just for engineers anymore. In fact, it never was. January, p. 36.

Steering on Wintery Roads. April, p. 74.

The Success Story Two researchers say that the best design teams, like storytellers, share different takes on the common theme. *Mechanical Engineering Design*, March, p. 14.

Thinking Lean When companies snip the muda from their systems, everyone in the enterprise gets into the act of change. *Engineering Management*, July, p. 4.

Up to Snuff Companies find that "product lifecycle management" can mean steering through the regulatory tangle of their business. March, p. 28.

What's My Line? Comedy skills for the engineer. *Engineering Management*, March, p. 8.

Working Backward Reverse engineering gets a role in detecting and preserving. June, p. 36.

Varrasi, John

The Age of Ingenuity By the late 19th century, as the prestige of engineers grew, their inventiveness gave rise to unprecedented industrial advancement. February, p. 44.

The Computer Assist In less than 40 years, a novelty has grown into a mainstay of engineering practice. October, p. 44.

The Greater Good As the 20th century began, engineering professionals started to see themselves as agents of change for the better. March, p. 42.

Reach for the Sky It's the effort that turned engineers into public heroes. September, p. 44.

Soaring Twenties The rise of cities, and of the machines that built them, set a trend that has outlasted the 20th century. May, p. 39.

The True Harnessing of Steam A club of professional men in New York City became America's mechanical brain trust. January, p. 46.

Wheeling and Dealing The inventiveness of engineers made the auto trade big business in the early 20th century. April, p. 44.

Winters, Jeffrey

Catching More Rays Nanoscale crystals can make solar cells with unheard-of efficiency. *Nanotechnology*, April, p. 14.

Deep Seam Farming Can adding microbes to hard-to-reach veins turn inaccessible coal into valuable methane? *Power & Energy*, June, p. 13.

Don't Move a Nanometer. January, p. 72.

Energy States. *Power & Energy*, February, p. 24.

Have Duct Tape, Will Travel One young engineer has turned simple materials into life-changing tools. June, p. 40.

Inside Out The nation's engineers turn their attention from conquering the Axis to colonizing the suburban frontier. August, p. 32.

Well Well. *Power & Energy*, June, p. 24.

Wolcott, Barbara

Drive of the Future. October, p. 32.

Woods, Robert O.

First in Mass Production Five and a half centuries ago, the printed Bible needed a lot of letters. October, p. 48.

Organic Developments From one coliseum to another, this pneumatic machine has served athletes, emperors, and a genius or two. April, p. 40.
